

Maryland Environmental Information

Provided by: Clearview Electric, Inc. d/b/a Clearview Energy (“Clearview”)

The standardized environmental data provided are for January 1, 2023 through December 31, 2023.

Source	PJM System Mix	Clearview Energy
Coal	14.94%	0%
Gas	44.21%	0%
Nuclear	33.62%	0%
Oil	0.27%	0%
Fuel Cell- Non-Renewable	0.02%	0%
Renewable Energy		
Captured Methane Gas	0.31%	0%
Solar Photovoltaic	1.38%	5.45%
Solid Waste	0.57%	0%
Hydro	0.96%	2.27%
Wind	3.55%	4.98%
Wood or Biomass	0.17%	0%
Other	0.00%	87.3%
Total	100%	100%
Air Emissions (lbs/MWh)		
Sulphur Dioxide (SO ₂)	.32	0.3%
Nitrogen Oxides (NO _x)	.25	0.22%
Carbon Dioxides (CO ₂)	732.79	616.75%

Power plants can generate electricity from several different fuel sources, resulting in different emissions. Clearview will report fuel sources and emissions data to customers to compare data among the companies providing electricity service in Maryland.

CO₂ is a “greenhouse gas, which may contribute to global climate change. SO₂ and NO_x released into the atmosphere react to form acid rain. NO_x also reacts to form ground level ozone, an unhealthy component of “smog”.
